

## **If you are unable to connect to HHS BYOD Secure:**

If you are unable to get your device to connect to HHS BYOD Secure, please follow these steps instead:

1. Connect to "HHS Wireless." The password is **marauder** Let your device remember this part.
2. Open a web browser and try to go anywhere (www.google.com). You should get redirected to a webpage with the HHS logo, and fields for your username and password; enter the same ones you use to log in to lab machines.

If your device goes to sleep or turns off, or if you move around the building and go to reconnect, you will need to enter the webpage login/password again.
